

**AgentPay**

The payment rail for

# .autonomous AI agents

.Pay-per-call APIs, settled in USDC on Solana. No accounts. No keys. No subscriptions

**Solana**

**USDC**

**HTTP 402**

**Mudassir Khan · Founder**

Investor Pitch · May 2026 · Seed Round

# AI agents are powerful — until they have .to pay

*.Every autonomous workflow breaks the moment a credit card is needed*

## No payment identity

.Agents can't sign up for credit cards, accept ToS, or pass KYC

## Stripe fees break micropayments

.floor makes a \$0.001 API call economically impossible 2.9% + \$0.30

## API keys are human-only

.Manual onboarding, dashboards, and rotation block agent autonomy

## Fraud rails distrust agents

.Card networks flag non-human traffic; chargebacks shut providers down

## THE GAP

# \$0.30

Stripe's minimum effective fee

.VS

# \$0.0001

a typical agent API call

# AgentPay turns HTTP 402 into a real .payment rail

*.A marketplace + gateway where agents discover, pay for, and consume APIs — autonomously*

## HTTP 402 native

Standard "Payment Required" headers — any HTTP .client can pay an API

## USDC on Solana

ms finality, sub-cent fees. Micropayments down 400~ .to \$0.0001

## Programmatic discovery

v1/discover returns priced APIs. Agents pick by price,/ .latency, success rate

## Drop-in SDKs

Python + TypeScript. One line: `ap.call("weather-v1", { city })` — handles 402, signs tx, retries

***.One wallet. Thousands of APIs. Zero human in the loop***

# .A market that didn't exist 18 months ago

*.Agentic commerce is the fastest-emerging payment category in fintech*

**\$8B**

Agentic spend in 2026

*Source: Juniper Research*

**5T-\$3**

Agentic commerce GMV by 2030

*Source: McKinsey*

**165M**

x402 transactions to date (Apr 2026)

*Source: Coinbase / Linux Foundation*

# .Three steps. Zero humans

*.An agent goes from "I need data" to a paid API response in ~500 ms*

## 01

### Discover

Agent calls /v1/discover. Gets a priced catalog of APIs ranked by .latency and success rate

## 02

### Pay

Provider returns HTTP 402. SDK signs a USDC transfer on Solana. .Confirms in ~400 ms

## 03

### Consume

Gateway verifies tx on-chain, proxies the request, streams the .response back to the agent

```
ap.call('weather-v1', {city: 'islamabad'}) // 402 -> sign -> retry -> 200 OK
```

# .Three curves are colliding in 2026

*.Standardization, infrastructure, and demand all hit at once*

## x402 became a standard

Linux Foundation now hosts x402 with Google, Stripe, AWS, Visa & Mastercard backing — a neutral protocol every agent will speak

## Solana made micropayments real

.ms confirmation, \$0.0001 fees, USDC on devnet → mainnet. The first chain where a \$0.001 API call clears profitably 400~

## Agents are leaving the lab

.LangChain, CrewAI, Vercel AI, Mastra — autonomous workflows are now the default architecture for AI products

***.Protocol standardized. Rails live. Demand here. The neutral marketplace isn't***

# We take 5% of every API call settled on .AgentPay

*.Aligned with providers — we only earn when they earn*

## PER-CALL ECONOMICS

Agent pays	<b>\$0.0010</b>
Solana network fee	<b>\$0.00001</b>
Provider receives	<b>\$0.00095</b>
AgentPay fee (5%)	<b>\$0.00005</b>

## SCALE TO REVENUE

<b>1M calls/day</b>	\$1K GMV/day	<b>day/\$50</b>
<b>100M calls/day</b>	\$100K GMV/day	<b>\$5K/day</b>
<b>1B calls/day</b>	\$1M GMV/day	<b>\$50K/day</b>
<b>10B calls/day</b>	\$10M GMV/day	<b>\$500K/day</b>

# Big players are entering — none of them are neutral

*.AgentPay is the developer-first, multi-chain-ready marketplace*

	AgentPay	Pay.sh (Solana×Google)	AWS Bedrock x402 +	RapidAPI (legacy)
Neutral marketplace	●	—	—	●
Per-call USDC settlement	●	●	●	—
No-account agent flow	●	●	●	—
Open-source SDKs	●	—	—	—
Chain-agnostic (roadmap)	●	—	●	—
Built for indie providers	●	—	—	●

*.Big-tech rails will optimize for big-tech APIs. The open ecosystem needs Switzerland*

# MVP shipped in 4 weeks. 30-day launch .targets

*.Backend, dashboard, and SDKs all building from a locked spec*

## WEEK MVP-4

- Week 1 Foundation**  
.FastAPI + Postgres, Solana devnet, USDC verify
- Week 2 Payment flow**  
.HTTP 402 challenge, nonce, replay protection, proxy
- Week 3 Provider dashboard**  
.Sign-In With Solana, API form, Recharts analytics
- Week 4 SDKs + launch**  
.agentpay-py, agentpay-ts, demo APIs, marketplace

## DAY TARGETS-30

- 25** Registered providers
- 50** Live APIs
- 10K** Agent calls
- 100** Unique agent wallets
- 200** GitHub stars

# Build the Stripe of the machine economy

Every autonomous workflow needs a payment layer. We're shipping it — neutral, open, and Solana-fast

## RAISING

# \$500K pre-seed

month runway to mainnet, 100 providers, \$1M GMV-12

- Engineering (60%) **\$300K**
- Hot wallet float (20%) **\$100K**
- GTM & devrel (20%) **\$100K**
